## 1. Objective

This is to advise that the joint Standard for Network Labelling and Signage has been published to the Ergon Process Zone and Energex RED

## 2. Document

The Standard is available as Ergon STNW1176 and Energex RED 01969. This Standard supersedes the previous Energex 00297 Network Labelling and Signage manual.

Part of the Energy Queensland Group

## Standard for Network Labelling and Signage

This standard provides information concerning the format, placement and physical details of site identification labels, operational identifier labels, equipment labels, cable destination labels, and signage within the distribution network. It is intended to assist designers and construction staff in specifying, ordering and fitting labels.

The new standard is based around the previous Energex standard and now extends to the North and South regions to standardise across the EQL business. This standard covers all labelling and Signage (i.e. HV and LV) for the Distribution Network in the South East (Energex) but only Labelling and Signage requirements for LV Distribution Network in the Northern and Southern (Ergon) regions. Labelling and Signage requirements for the Northern and Southern (Ergon) region is covered in STNW1172 and STNW1173.

The joint labelling and signage manual has not introduced changes to the current labelling and signage practices in the South East (Energex), however it introduces detailed labelling and signage requirements for LV in the Northern and Southern Region (Ergon).

It is not intended that this Standard be retrospective however where labelling and signage is updated it shall be to this standard where possible.

### 3. Update to Manuals

A copy of the standard is available via the RED/Process Zone document system for internal staff.

The up-dated manual is available to external service providers via the internet. The Manual is an uncontrolled document when printed.
